Commune Chief Points

What are main water/sanitation problems in village? (eg....); How many HH are affected? (by type is good) — children sick infected
Water pollution of wells/ponds — streams
What causes this? How does flooding situation relate to this? one kid got dengue mosquito
Contamination of water in house/storage
Limited wells / water access
Limited latrine access / open defecation
Lack of filters
Other....

399 total pop.

Which village(s) are most affected? 277 / 187

Where do most people get drinking water from (type of source)?

Where do most people get other household water from (type of source)?

Which problems are the most important to address?

What types of water borne diseases are a problem? How many people are affected?

277 / 187 / 90

Population of village(s)

Number of wells (how many of these work); number of latrines (how many of these work); details on types; how / who maintains them and what are constraints to maintenance (knowledge, costs....), known flooding and pollutant issues

How many filters in the village?

	HH	Pop	Latrines Not	Adults 18	Kids 18
Kandal	90	399	187	277	122

(Id #1 per 22 / Id #2 10) 21 toilets to be built by villagers / wells

Additional ideas:

Which other NGOs are working on water/sanitation in the commune? Where and what do they do? What approach do they use for materials (eg villagers buy, materials are subsidized, support given to producers....). What has been feedback from villagers in past on approaches (eg subsidies, payment for materials, support to producers...)

399 − 277 = 122 kids

What has inspired villager participation in the past? Where there any project that were tried that didn't work that caused poor feelings (eg, savings group that collapsed, etc...); if so, can you identify what led to the failures?
